

MAS in Dance Science third round: Start in July 2019

The University of Bern (Switzerland) offers the third round of the Master of Advanced Studies (MAS) programme in Dance Science from July on. With its unique focus on Dance Science applied to different populations (e.g., children, generation 50+, disabilities, as well as amateur and professional dancers), the MAS in Dance Science prepares graduates for a wide range of careers in the dance world.

Dance Science addresses training, lifestyle and performance of professional dancers as well as the effects of dance activities on different population groups (e.g., children, the elderly). With its origin in sport science, dance science as an interdisciplinary research area establishes a strong link between theory and practice.

The MAS in Dance Science has a duration of three years and will start for the third time this July. The study programme allows dance professionals to pursue their degree whilst continuing to work. The MAS is aimed at dancers, teachers, choreographers and artistic directors as well as allied health care specialists and scientists with an affinity for dance.

The MAS in Dance Science programme (60 ECTS) comprises three Certificates of Advanced Studies (CAS) from the University of Bern that can also be completed separately. Two certificates will be given at the University of Bern (Switzerland), and one hosted by tamed in Frankfurt am Main (Germany). The MAS Dance Science will start this July with the CAS in Dance Science: Health & Performance in cooperation with tamed in Frankfurt.

In the CAS in Dance Science: Health & Performance, candidates will critically assess anatomical, physiological and psychological aspects of the dancing body and dance performance. The curriculum revolves around questions on health and well-being of dancing children, adults, seniors, and disabled persons both involved in recreational and professional dance.

Take the chance and be part of this exciting new field, which is dance science!

Application deadline: 31 May 2019
